Annex B

(continued)

Tables checklist

Unless otherwise stated, the planning tables are for the three years of the plan with two preceding years for comparison. Likewise, the expenditure tables are for the three years of the plan with three preceding years for comparison.

The same tables should be used at the sub-district level. The breakdown by sub-district should be replaced with a breakdown by municipality if there is more than one municipality in a sub-district. If there is only one municipality, just the total figures for the sub-district should be shown.

Some other tables are recommended in the narrative but are not listed in the above table because examples are not shown.

Annex B
